English

streamer simulator. streamer simulator game. flight simulator streamer. streamer propagation simulation. streamer simulator mod apk. twitch streamer simulator. streamer simulator apk. streamer simulator free download. streamer simulator. streamer simulator download

Worst game in the world. Take an idle game, let a fun-vampire suck all the fun out and take away the aspect of being able to put it down sometimes and you have this. Streamer simulator inaccurately simulates the life of a streamer, when you get 1 view the guy starts donating money, money isn't gained through views but through donations and subs in this game. Nice-ish looking room, but two clickable things in the room, no explanations and repetitive gameplay to the max. Seriously this game is more repetitive than idle games. Looking for a way to waste u20ac5,99? Then this is the game for you! Looking for enjoyment, fun gameplay or brain-wrecking strategy? You came to the wrong game.. Oh man, the game is beyond broken. It seems like it was rushed beyond anything, just to get it out quickly and making money. So much stuff is beyond bugged! Want some examples? Okay. - If you buy any upgrade that improves EXP gain, it breaks the progression system. - You can keep streaming Mineblock repeatedly, as long as you don't let the progress bar reach 100% It's 100% rushed, and it seems to be pulling down the Simulator type into the mud.. Bad. Just bad.. This game is so bad it is a waste of money. The game has no good game play aside from clicking 10 times. don't bother getting this trash of a game, I can't even call this a game, can you. Do you dare waste the money to buy this, if so go for it and regret it.. Game is unplayable due to the fact that ever resolution is messed up cutting off portions of the screen. Perhaps it's my 1900x1200 native resolution but I've tried windowed mode with every resolution on the list. When I

go into most menus I can't even back out. Literally unplayable. I would not recommend this game.. Game is unplayable due to the fact that ever resolution is messed up cutting off portions of the screen. Perhaps it's my 1900x1200 native resolution but I've tried windowed mode with every resolution on the list. When I go into most menus I can't even back out. Literally unplayable.
